

## WORKSHEET #1

**Definition 1.** A triple  $(a, b, c)$  of natural numbers is a **Pythagorean triple** if they form the side lengths of a right triangle, where  $c$  is the length of the hypotenuse.

**Theorem 2** (Fundamental Theorem of Arithmetic). Every natural number  $n \geq 1$  can be written as a product of prime numbers:

$$n = p_1^{e_1} p_2^{e_2} \cdots p_k^{e_k}.$$

This expression is unique up to reordering. □

**Definition 3.** We call the number  $e_i$  the **multiplicity** of the prime  $p_i$  in the prime factorization of

$$n = p_1^{e_1} p_2^{e_2} \cdots p_k^{e_k}.$$

**Definition 4.** Let  $m, n$  be integers and  $K \geq 1$  be a natural number. We say that  $m$  **is congruent to  $n$  modulo  $K$** , written as  $m \equiv n \pmod{K}$ , if  $m - n$  is a multiple of  $K$ .

**Theorem 5.** Let  $n$  be an integer and  $K \geq 1$  a natural number. Then  $n$  is congruent to exactly one nonnegative integer between 0 and  $K - 1$ : this number is the “remainder” when you divide  $n$  by  $K$ . □

**Proposition 6.** Let  $m, m', n, n'$  and  $K$  be natural numbers. Suppose that

$$m \equiv m' \pmod{K} \quad \text{and} \quad n \equiv n' \pmod{K}.$$

Then

$$m + n \equiv m' + n' \pmod{K} \quad \text{and} \quad mn \equiv m'n' \pmod{K}. \quad \square$$

**Definition 7.** A triple  $(a, b, c)$  of natural numbers is a **primitive Pythagorean triple (PPT)** if  $a^2 + b^2 = c^2$ , and there is no common factor of  $a, b, c$  greater than 1; equivalently,  $a, b, c$  have no common prime factor.

**Theorem 8.** The set of primitive Pythagorean triples  $(a, b, c)$  with  $a$  odd is given by the formula

$$a = st, \quad b = \frac{s^2 - t^2}{2}, \quad c = \frac{s^2 + t^2}{2},$$

where  $s > t \geq 1$  are odd integers with no common factors.

**Theorem 9.** The set of points on the unit circle  $x^2 + y^2 = 1$  with positive rational coordinates is given by the formula

$$(x, y) = \left( \frac{2v}{v^2 + 1}, \frac{v^2 - 1}{v^2 + 1} \right)$$

where  $v$  ranges through rational numbers greater than one.

## WORKSHEET #2

**Definition 10.** The **greatest common divisor** of two integers  $a$  and  $b$ , denoted  $\gcd(a, b)$ , is the largest integer that divides  $a$  and  $b$ .

**Definition 11.** Two integers  $a$  and  $b$  are **coprime** if  $\gcd(a, b) = 1$ .

**Theorem 12.** The Euclidean algorithm terminates and outputs the correct value of  $\gcd(a, b)$ .

**Definition 13.** An expression of the form  $ra + sb$  with  $r, s \in \mathbb{Z}$  is a **linear combination** of  $a$  and  $b$ .

**Corollary 14.** If  $a, b$  are integers, then  $\gcd(a, b)$  can be realized as a linear combination of  $a$  and  $b$ . Concretely, we can use the Euclidean algorithm to do this.

**Theorem 15.** Let  $a, b, c$  be integers. The equation

$$ax + by = c$$

has an integer solution if and only if  $c$  is divisible by  $d := \gcd(a, b)$ . If this is the case, there are infinitely many solutions. If  $(x_0, y_0)$  is a one particular solution, then the general solution is of the form

$$x = x_0 - (b/d)n, \quad y = y_0 + (a/d)n$$

as  $n$  ranges through all integers.

#### PROBLEM SET #1

**Lemma 16.** Let  $a, b, c$  be integers. If  $a$  and  $b$  are coprime, and  $a$  divides  $bc$ , then  $a$  divides  $c$ .

#### WORKSHEET #3

**Definition 17.** A **congruence class modulo  $K$**  is a set of the form

$$[a] := \{n \in \mathbb{Z} \mid n \equiv a \pmod{K}\}$$

for some  $a \in \mathbb{Z}$ .

**Definition 18.** A **representative** for a congruence class is an element of the congruence class.

**Proposition 19.** Given  $K > 0$ , the set of integers  $\mathbb{Z}$  is the disjoint union of  $K$  congruence classes:

$$\mathbb{Z} = [0] \sqcup [1] \sqcup \cdots \sqcup [K - 1].$$

**Definition 20.** The ring  $\mathbb{Z}_K$  is the set of congruence classes modulo  $K$ :

$$\{[0], [1], \dots, [K - 1]\}$$

equipped with the operations

$$[a] + [b] = [a + b] \quad \text{and} \quad [a][b] = [ab].$$

**Definition 21.** We say that a number  $a$  is a **unit modulo  $K$**  if there is an integer solution  $x$  to  $ax \equiv 1 \pmod{K}$ , and we say that such a number  $x$  is an **inverse modulo  $K$**  to  $a$ .

**Definition 22.** We say that a congruence class  $[a]$  is a **unit in  $\mathbb{Z}_K$**  if there is a congruence class  $x \in \mathbb{Z}_K$  such that  $[a]x = [1]$ , and we say that such a class  $x$  is an **inverse** to  $[a]$  in  $\mathbb{Z}_K$ .

**Theorem 23.** Let  $a$  and  $n$  be integers, with  $n$  positive. Then  $a$  is a unit modulo  $n$  if and only if  $a$  and  $n$  are coprime.

**Theorem 24** (Chinese Remainder Theorem). Given  $m_1, \dots, m_k > 0$  integers such that  $m_i$  and  $m_j$  are coprime for each  $i \neq j$ , and  $a_1, \dots, a_k \in \mathbb{Z}$ , the system of congruences

$$\begin{cases} x \equiv a_1 \pmod{m_1} \\ x \equiv a_2 \pmod{m_2} \\ \vdots \\ x \equiv a_k \pmod{m_k} \end{cases}$$

has a solution  $x \in \mathbb{Z}$ . Moreover, the set of solutions forms a unique congruence class modulo  $m_1 m_2 \cdots m_k$ .

#### PROBLEM SET #2

**Lemma 25.** Let  $a, b, c$  be integers. If  $a$  and  $b$  are coprime,  $a$  divides  $c$ , and  $b$  divides  $c$ , then  $ab$  divides  $c$ .

**Definition 26.** Given integers  $a_1, \dots, a_m$ , the **greatest common divisor** of  $a_1, \dots, a_m$  is the largest integer that divides all of them.

**Theorem 27.** Let  $a, b, n$  be integers, with  $n > 0$ . Then  $[a]x = [b]$  has a solution  $x$  in  $\mathbb{Z}_n$  if and only if  $\gcd(a, n)$  divides  $b$ . In this case, the number of distinct solutions is exactly  $\gcd(a, n)$ .

#### WORKSHEET #4

**Definition 28.** A **group** is a set  $G$  equipped with a product operation

$$G \times G \rightarrow G \quad (g, h) \mapsto gh$$

and an **identity** element  $1 \in G$  such that

- the product is associative:  $(gh)k = g(hk)$  for all  $g, h, k \in G$ ,
- $g1 = 1g = g$  for all  $g \in G$ , and
- for every  $g \in G$ , there is an inverse element  $g^{-1} \in G$  such that  $gg^{-1} = g^{-1}g = 1$ .

**Definition 29.** A group is **abelian** if the product is commutative:  $gh = hg$  for all  $g, h \in G$ .

**Definition 30.** A **finite group** is a group  $G$  that is a finite set.

**Definition 31.** Let  $G$  be a group and  $g \in G$ . The **order** of  $g$  is the smallest positive integer  $n$  such that  $g^n = e$ , if some such  $n$  exists, and  $\infty$  if no such integer exists.

**Theorem 32** (Lagrange's Theorem). Let  $G$  be a finite group and  $g \in G$ . Then the order of  $g$  is finite and divides the cardinality of the group  $G$ .

**Theorem 33** (Fermat's Little Theorem). Let  $p$  be a prime number and  $a$  an integer. If  $p$  does not divide  $a$ , then

$$a^{p-1} \equiv 1 \pmod{p}.$$

**Definition 34.** Let  $n$  be a positive integer. We define  $\varphi(n)$  to be the number of elements of  $\mathbb{Z}_n^\times$ . We call this **Euler's phi function**.

**Proposition 35.** Euler's phi function satisfies the following properties.

- (1) If  $p$  is a prime and  $n$  is a positive integer, then  $\varphi(p^n) = p^{n-1}(p-1)$ .
- (2) If  $m, n$  are coprime positive integers, then  $\varphi(mn) = \varphi(m)\varphi(n)$ .

**Theorem 36** (Euler's Theorem). Let  $a, n$  be coprime integers, with  $n$  positive. Then

$$a^{\varphi(n)} \equiv 1 \pmod{n}.$$

#### WORKSHEET #5

**Proposition 37.** Let  $p$  be a prime. Let  $p(x)$  be a polynomial of degree  $d$  with coefficients in  $\mathbb{Z}_p$ . Then  $p(x)$  has at most  $d$  roots in  $\mathbb{Z}_p$ . □

**Lemma 38.** If  $G$  is a group,  $g \in G$ , and  $n$  a positive integer such that  $g^n = 1$ , then the order of  $g$  divides  $n$ .

**Definition 39.** Let  $n$  be a positive integer. An element  $x \in \mathbb{Z}_n^\times$  is a **primitive root** if the order of  $x$  in  $\mathbb{Z}_n^\times$  equals  $\phi(n)$  (the cardinality of  $\mathbb{Z}_n^\times$ ).

**Theorem 40.** Let  $p$  be a prime number. Then there exists a primitive root in  $\mathbb{Z}_p^\times$ .

**Definition 41.** If  $[a]$  is a primitive root in  $\mathbb{Z}_p$ , the function

$$\mathbb{Z}_p^\times \rightarrow \mathbb{Z}_{p-1} \quad [b] \mapsto [m] \text{ such that } [b] = [a]^m$$

is called the **discrete logarithm** or **index** of  $\mathbb{Z}_p^\times$  with base  $[a]$ .

**Lemma 42.** Let  $p$  be a prime and  $[a]$  a primitive root in  $\mathbb{Z}_p$ . The corresponding discrete logarithm function  $I : \mathbb{Z}_p^\times \rightarrow \mathbb{Z}_{p-1}$  satisfies the property

$$I(xy) = I(x) + I(y) \quad \text{and} \quad I(x^n) = [n]I(x)$$

for  $x, y \in \mathbb{Z}_p^\times$  and  $n \in \mathbb{N}$ .

**Proposition 43.** Let  $n$  be a positive integer. Then  $\sum_{d|n} \varphi(d) = n$ .

**Theorem 44.** Let  $p$  be a prime. Suppose that there are  $n$  distinct solutions to  $x^n = 1$  in  $\mathbb{Z}_p$ . Then  $\mathbb{Z}_p^\times$  has exactly  $\varphi(n)$  elements of order  $n$ .

#### WORKSHEET #6

**Definition 45.** We say that an element  $x \in \mathbb{Z}_n$  is a **square** or a **quadratic residue** if there is some  $y \in \mathbb{Z}_n$  such that  $y^2 = x$ , and in this case, we call  $y$  a **square root** of  $x$ .

**Definition 46.** Let  $p$  be an odd prime. For  $r \in \mathbb{Z}$  not a multiple of  $p$  we define the **Legendre symbol** of  $r$  with respect to  $p$  as

$$\left(\frac{r}{p}\right) = \begin{cases} 1 & \text{if } [r] \text{ is a square in } \mathbb{Z}_p, \\ -1 & \text{if } [r] \text{ is a not square in } \mathbb{Z}_p. \end{cases}$$

**Theorem 47** (Euler's Criterion). For  $p$  an odd prime and  $r \in \mathbb{Z}$  not a multiple of  $p$ , we have

$$\left(\frac{r}{p}\right) \equiv r^{(p-1)/2} \pmod{p}.$$

**Theorem 48** (Quadratic Reciprocity part -1). If  $p$  is odd, then

$$\left(\frac{-1}{p}\right) = \begin{cases} 1 & \text{if } p \equiv 1 \pmod{4} \\ -1 & \text{if } p \equiv 3 \pmod{4} \end{cases}.$$

**Proposition 49.** Let  $p$  be an odd prime and  $a, b$  integers not divisible by  $p$ . Then

$$(1) \ a \equiv b \pmod{p} \text{ implies that } \left(\frac{a}{p}\right) = \left(\frac{b}{p}\right).$$

$$(2) \ \left(\frac{ab}{p}\right) = \left(\frac{a}{p}\right) \left(\frac{b}{p}\right).$$

$$(3) \ \left(\frac{a^2}{p}\right) = 1.$$

#### PROBLEM SET #3

**Theorem 50.** If  $p$  is an odd prime and  $n > 0$ , then  $\mathbb{Z}_{p^n}$  has a primitive root.

#### WORKSHEET #7

**Theorem 51** (Quadratic Reciprocity). Let  $p$  and  $q$  be distinct odd primes. Then

$$\left(\frac{p}{q}\right) = \left(\frac{q}{p}\right) \quad \text{if either } p \equiv 1 \pmod{4} \text{ or } q \equiv 1 \pmod{4},$$

$$\left(\frac{p}{q}\right) = -\left(\frac{q}{p}\right) \quad \text{if both } p \equiv 3 \pmod{4} \text{ and } q \equiv 3 \pmod{4}.$$

**Theorem 52** (Quadratic Reciprocity part 2). Let  $p$  be an odd prime. Then

$$\left(\frac{2}{p}\right) = 1 \quad \text{if } p \equiv \pm 1 \pmod{8},$$

$$\left(\frac{2}{p}\right) = -1 \quad \text{if } p \equiv \pm 3 \pmod{8}.$$

**Lemma 53** (Gauss' Lemma). *Let  $p$  be an odd prime and set  $p' = \frac{p-1}{2}$ . Note that every integer coprime to  $p$  is congruent modulo  $p$  to a unique integer in the set  $S = \{\pm 1, \pm 2, \dots, \pm p'\}$ .*

*Let  $a$  be an integer coprime to  $p$ . Consider the sequence*

$$a, 2a, 3a, \dots, p'a$$

*and replace each element in the sequence with element of  $S$  that is congruent with modulo  $p$  to get a list  $L$  of  $p'$ -many elements of  $S$ .*

*Then  $\left(\frac{a}{p}\right) = (-1)^\nu$ , where  $\nu$  is the number of negative integers in  $L$ .*

**Lemma 54.** *Let  $p$  and  $q$  be two coprime odd positive integers. Then*

$$\sum_{k=1}^{\frac{p-1}{2}} \left\lfloor \frac{kq}{p} \right\rfloor + \sum_{\ell=1}^{\frac{q-1}{2}} \left\lfloor \frac{\ell p}{q} \right\rfloor = \frac{p-1}{2} \cdot \frac{q-1}{2}.$$

#### WORKSHEET #8

**Theorem 55** (Euclid). *There are infinitely many primes.*

**Proposition 56.** *For each of the following conditions, there are infinitely many primes  $p$ :*

- $p \equiv 1 \pmod{3}$
- $p \equiv 2 \pmod{3}$
- $p \equiv 1 \pmod{4}$
- $p \equiv 3 \pmod{4}$

#### WORKSHEET #9

**Theorem 57.** *An odd prime is a sum of two squares if and only if it is congruent to 1 modulo 4.*

**Theorem 58** (Sums of Two Squares Theorem). *A positive integer  $n$  is a sum of two squares if and only if: for every prime  $p$  such that  $p \equiv 3 \pmod{4}$  and  $p$  divides  $n$ , the multiplicity of  $p$  in the prime factorization of  $n$  is even.*
